

E-14A

Two sets of striated marks present on base

- one such mark on ms comp confirms that the mark on E-3 was made by the same tool working edge.

MK on E-3 base

There are no such marks on E-14B or any other car city cases.

(see photo)

none taken (no time)

a reason has caused me to reconsider this - it seems to fall just off 4x by I told in P&2 that this from association could be studied further & be made some tests where in by caused marks to be made on base of text city by knife back of one of my ^{knives} - Perhaps a cast of better would allow to get small marks to be discussed more easily.

base mark
